

Figure 3. Per-canonical breakdown of invented-word predictions at OLMo 2 7B `N→F sente→close L 10` across the four pre-registered scopes (v3 → v6). M4b is the intended-arity agreement (chance $\approx 50\%$ under the majority-arity baseline). v3 appears arity-respecting; v5 and v6 collapse 100% to a single attractor (`nand` / `unprovably`).
