

Figure 5. Embedding-similarity vs linear-probe agreement across L 0 + focus-layers per model. Dotted lines: chance baselines (agree-all 6.7%, agree-arity 13%, arity-match 53%). Solid horizontal line: pre-registered 'mechanism gap closed' threshold at 60% for agree-arity. L 0 floor (highlighted grey) confirms the operator-region attractor is constructed by intermediate-layer processing.
